

Safe Plus Dental Care

Role-Based Access Control & Clinical Feature Guide

EXECUTIVE SUMMARY

Safe Plus Dental Care operates on a structured 4-tier user ecosystem: Administrator, Doctor, Patient, and Receptionist. This document provides a complete functional breakdown of the privileges, data interactions, and operational responsibilities of each user role.

1. ADMINISTRATOR - System Governance & Resource Management

Primary Focus: Platform security, staff authorization, high-level metrics, and physical asset management.

- **User Management (CRUD):** Directly creates, inspects, and modifies system accounts. Evaluates incoming registration requests for Doctors and Receptionists, with authority to Approve, Suspend, or Reactivate users.
- **Clinic Equipment Inventory:** Maintains the central catalog of surgical machines, dental chairs, and diagnostic units. Tracks equipment status (Available, In Use, Maintenance) and usage allocation.
- **Monthly Analytics & Monitoring:** Provides live statistics detailing total patient registrations, active doctors, front-desk staff, and backlogs of pending account approvals.
- **Doctor Shift Rostering:** Configures weekly consultation availability for all dentists, specifying exact visiting days and working hours (start and end times).

2. DOCTOR - Clinical Consultations & Electronic Records

Primary Focus: Patient treatment, clinical examination, prescription generation, and diagnostic history.

- **Real-Time Appointment Queue:** Filters and lists all confirmed and pending patient consultations assigned specifically to the logged-in doctor, sorted by schedule time and serial order.
- **Digital Prescription Generation:** Provides an intuitive form to record oral diagnosis, treatment advice, and multi-drug regimens (including medicine names, dosage frequencies, and dietary instructions). Automatically closes the appointment as Completed upon issuance.
- **Patient Case History Review:** Maintains historical treatment records for every patient treated. Enables doctors to track progression, previous medication reactions, and past diagnostic notes.

3. PATIENT - Self-Service Portal & Care Continuity

Primary Focus: Exploring dentist schedules, queue reservations, payment preferences, and medical records.

- **Live Schedule Discovery & Serial Booking:** Allows patients to inspect doctor availability dynamically. Upon selecting an open date and time, the system auto-calculates and issues an official queue Serial Number.
- **Payment Method Selection:** Enables patients to designate their preferred billing channel (Cash at Clinic, Credit/Debit Card, Mobile Banking, or Insurance) prior to arrival.
- **Prescription Vault & Print View:** Provides continuous access to electronic prescriptions issued by doctors, with an integrated print button for physical pharmacy presentation.

4. RECEPTIONIST - Front-Desk Operations & Patient Flow

Primary Focus: Patient welcoming, appointment confirmation, treatment invoicing, and equipment distribution.

- **Appointment Scheduling & Verification:** Reviews raw patient booking requests clinic-wide, granting confirmation status to valid appointments or cancelling conflicting slots.
- **Billing & Financial Invoicing:** Detects completed clinical consultations and generates official invoices with total treatment charges. Tracks balances and updates payment records (Unpaid, Partial, Paid).
- **Clinical Equipment Allocation:** Assigns free dental instruments and diagnostic equipment to active duty doctors for their shift, instantly reserving the item and releasing it upon completion.

Clinical Collaboration Lifecycle

1. Patient books an appointment online -> System generates Serial Number in Queue.
2. Receptionist verifies booking and marks appointment Confirmed.
3. Doctor reviews queue, conducts treatment, and generates Prescription -> Status becomes Completed.
4. Receptionist generates Invoice based on treatment -> Records payment as Paid.
5. Patient accesses prescription and invoice history through personal dashboard.

Evaluation Test Accounts

Role	Email / Username	Password	Access Level
Administrator	admin@dentalclinic.com	admin123	Full Control / Active
Doctor	doctor@dentalclinic.com	doctor123	Clinical Workspace / Active
Patient	karim@gmail.com	pass	Patient Portal / Active
Receptionist	Sign up or Admin Created	User Defined	Front Desk / Pending Admin Approval
